

# **Panel: IR Research and Open Source**

Open Source Information Retrieval Workshop 2006

The panel brings together representatives from industry and academia to discuss their experiences with the development of open source tools as they pertain to information retrieval. The goal of this panel is to collect ideas for the coordination of research and the development of tools, data sets, and standards that can help spur future advances in the area. The experience of the panelists and their interaction with the audience should bring up new challenges and foster many new ideas and approaches. The panel is scheduled for the end of the Workshop to allow for the incorporation of the presented works in the discussions.
